

RAJESH NELLI

Frontend Web Developer

Former Project Engineer

Stack: JavaScript, CSS, HTML, React, Next.js

gacc.rajeshnelli@gmail.com

Summary

I worked as a Project Engineer for 2 years and 7 months, Freelance Web Developer for 1 year and 10 months and worked on online sales for the remaining time.

I have been practicing JavaScript, CSS and HTML since 2021. I started practicing React and Next.js.

I earned "JavaScript Basic", "JavaScript Intermediate" certificates and 5 star badges of Java and Problem Solving(Javascript) on HackerRank. I earned "JavaScript V9" & "Responsive Web Design V9" certifications on freeCodeCamp.

Experience

Entrepreneur

Owner | May 2025 - Present | [View Instagram Page](#)

I started an online Print on Demand Business called "myangelsprint". The idea is to sell custom printed products to the consumers and creators(Merchandise) on popular social media platforms. Since I don't have Ad. budget, I am trying to grow it organically which may take years of time to get sales. Meanwhile, I will try to secure Ad. budget to grow it fast.

Skills: JavaScript, Meta Business Suite, UiPath

Frontend Developer

Freelance | Jul 2023 - Apr 2025 (1 year, 10 months) | [View The Projects](#)

I used JavaScript, CSS and HTML to develop UI for 10+ websites. I used Node.js and PHP to send the form data to E-Mail. I used JSON to create blogs.

Skills: JavaScript, CSS, HTML, Node.js, PHP, JSON, Brevo Email API, PHPMailer

Project Engineer

Seismo Research and Development Centre | Hyderabad | Nov 2020 - Jun 2023 (2 years, 7 months) | [View The Project](#)

This project is about predicting earthquakes as accurately as possible with the available resources. The following are the highlights of my work,

- Developed the project website with HTML, CSS, JavaScript, MySQL, PHP and third party applications to embed google maps and twitter feed.
- Configured the windows machine for free remote access to the data.
- Used SolidWorks to create a 3D model of the machine.
- Upgraded the machine design 2 times to reduced the space occupied and weight for portability and easy mounting
- Used IoT(Arduino cloud, ESP8266 and NodeMCU) to remotely switch the devices(CPU, Camera and etc.) on/off.
- Programmed the electronics(Stepper motor, Arduino Microcontrollers, Limit switch, IR sensor, UPS, Solar panel, Battery, Relay and etc.) of the Earthquake prediction equipment.
- Configured Raspberry Pi to reduce the size and cost of the Windows Machine.
- Corrected the documents which are posted on twitter and sent to investors .

Skills: JavaScript, CSS, HTML, MySQL, PHP, Arduino Microcontroller, Arduino IDE, C, ESP8266, Raspberry PI, NodeMCU, SolidWorks

Intern

Palle Srujana | May 2019 - Jul 2019 (2 months) | [Project Document](#) | [View The Machine](#)

The main work in this internship is to upgrade the software of two existing machines called Asu machine and Marking machine which are created to solve the problems associated with two of the handloom processes called Asu and Marking. We worked as a team of two members.

The machines were programmed with Assembly language which has no data input feature. Data input feature facilitates the machine user to feed new design whenever needed without depending on the machine maker.

We replaced Assembly language with Arduino software which is based on C language which has data input feature. We replaced some electronic devices with new ones to simplify the configuration by reducing the number of devices.

Skills: Arduino, C

Education

RGUKT Basar

B.Tech. | Mechanical Engineering | Jul 2016 - Dec 2020 | CGPA: 7.38/10

RGUKT Basar

Pre-University Course | MBiPC | Jul 2014 - Dec 2016 | CGPA: 8.0/10

Govt. High School, Amadalavalasa

Secondary School Certificate | Jun 2013 - May 2014 | CGPA: 9.8/10

Projects

AmazonToppers

Mar 2023 - Jun 2023 | 3 months | [View Video](#)

I developed a website called “AmazonToppers” where one can find top featured products from amazon.in. I created this website to implement “Low Commision - High Sales” strategy.

Skills: JavaScript, CSS, HTML, Node.js, MySQL

Mechdates

Jul 2018 - Dec 2018 | 6 months | [View Video](#)

As a team of 2, we developed a website called “Mechdates” to facilitate the students in our engineering branch to post their work, access the others’ works, discuss subjects on forum page, access books for competitive exams, get suggestions from others regarding their goals.

Skills: JavaScript, CSS, HTML, PHP, MySQL

Oxford 5000

Jun 2026 | [View the Web App](#)

Learning lakhs of English words is not possible. So Oxford provided a list of 5000 words and 800 phrases in the form of a scrollable website and pdf. But scrollable lists cannot save the progress of learning. I created a web page to save the progress and view the meaning of the words in Oxford's website and Google.

Skills: JavaScript, CSS, HTML

Sorted Google News

Dec 2022 | [View the Web App](#)

Google News has 8 categories. To consume news from all the categories equally, I created a web app called "Sorted Google News" using the RSS provided by the Google news. After loading, we see 8 news from 8 categories and a "Load More" button to load the next 8 news.

Skills: JavaScript, CSS, HTML, PHP

Fixed Deposit Interest Calculator

Jan 2024 | [View the Web App](#)

I created a web app to calculate Fixed Deposit interest and view the growth of investment over a period of time.

Skills: JavaScript, CSS, HTML

Linkedin Unread Messages Reader

Apr 2024 | [View Video](#)

I used UiPath to read unread LinkedIn messages to store in a Google Sheet.

Skills: UiPath, JavaScript
